## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, 10-14, drawn to a method for diagnosing Alzheimer's Disease, classified in class 435, subclass 4.
- II. Claims 15-18, 21 and 22, drawn to a kit for diagnosing Alzheimer's Disease, classified in class 435, subclass 810.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another and materially different apparatus such as a kit that does not comprise antibodies (i.e., for detecting the level of carboxyl-terminal truncated apolipoprotein E without using antibodies.)

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required

Art Unit: 1641

because the inventions require a different field of search (see MPEP § 808.02),  
restriction for examination purposes as indicated is proper.
